

OPERATING SYSTEMS

Process Management and Scheduling

S.Thenmozhi

Department of Computer Applications

- Round Robin is the preemptive process scheduling algorithm.
- Each process is provided a fix time to execute, it is called a **quantum**.
- Once a process is executed for a given time period, it is preempted and other process executes for a given time period.
- Context switching is used to save states of preempted processes

OPERATING SYSTEMS

Round Robin Scheduling

Process	Burst Time
P1	24
P2	3
P3	3

- RR Gantt chart with $q=4$

- Typically, higher average turnaround than SJF, but better *response*
- q should be large compared to context switch time
- q usually 10ms to 100ms, context switch < 10 usec

THANK YOU
