

1 | Experiential Learning Component

1.1 | UNIT III : Experiential Learning - 9

[Level-1: 3Q, Level-2: 1Q]

1. **LEVEL - 2** : Binary Tree Traversal (Using Linked List): Write a function to perform in-order, pre-order, and post-order traversal on a binary tree represented using a linked list.
 - Input: Binary tree structure.
 - Output: Display the traversal order for each type of traversal.
2. **LEVEL - 1 : Heap Trees**: Write a program to create a max heap using an array.
 - Input: Number of elements and their values.
 - Output: Display the heap structure in array form.
3. **LEVEL - 1 : Heap Deletion**:
 - Implement a function to delete the root node from a max heap.
 - Output: Display the updated heap structure in array form.
4. **LEVEL - 1 : Heap Display**:
 - Implement a function to display the heap tree after performing insertion or deletion operations.
