

Experiential Learning on UML Models

Read the below given project's abstract, users with functionality and draw class diagram, use case diagram, Sequence and an activity diagram for each

1. Project Title: Crash Pad

Abstract: Crash Pad is a Web Application that helps users to book flats for rent for a specific time period based on location. I.e. providing flats for rent for a time period greater than a month and a time period less than eleven months. An application that also provides furniture on rent for the requested time period. It enables customers to add the flats and furniture to wish list from where the customer can rent both, which will be provided with access to digital cash payments and which would also have a feature to send an invoice to the customer Email and a pdf of the invoice to download.

USERS

- **Admin:**

- ♣ Add new flats and furniture.
- ♣ Update flats and furniture.
- ♣ Send invoices and bills to the customer.

- **Verifier:** Verifier is the person who checks and approves customers who can then rent flats and furniture.

- ♣ Check for authenticity of the provided scanned Id proof.
- ♣ Approval and disapproval based on customer background check.

- **Customer:** The customer is the person who rents flats and furniture.

- ♣ Search for flats based on the location.
- ♣ Rent flats and furniture for a specific time period.
- ♣ Edit or delete liked flats and furniture from wish list.
- ♣ Make payment on like flats and furniture.
- ♣ Receive invoices and bill for rented flat and furniture

2. Project Title: Legal Assistant

ABSTRACT : "Legal Assistant" is an interactive web application. The application intends towards helping users find lawyers in Bangalore and also based on ratings and discipline of law. The different users of this application are Lawyers, Clients and Students. All of them have to register to use this application. All the registered lawyers will be verified by the admin. It includes an appointment booking functionality for the Clients to discuss their legal issues with the lawyers. It also includes a career section where the students can find job or internship advertisements (to work as a junior under some lawyer) posted by the lawyers. People might not be familiar with many legal terms and the IPC sections and their description. So, this

application includes a reference section where the users can refer the legal dictionary and the IPC Sections reference. It also includes a legal advice section where the users can post any of their legal queries. These queries will be answered by the lawyers. Lawyers can schedule appointments for their existing clients and also update the case progress which can be viewed by clients. The clients can rate the lawyers.

Users

Admin – Admin will verify the lawyers registered on this application with the help of the bar id provided by the lawyers during the registration. He will add legal terms. He can also view registered lawyers, clients and students who are registered on this application.

Client – Client will register on the application. They can search lawyers based on the discipline of law and also based on ratings. They will book appointments with lawyers to discuss their issue. They can post any legal queries for free which will be answered by the lawyers. They can also refer legal dictionary and legal blogs and IPC Sections guide. They can rate the lawyers. They will make payments for the appointments booked. They can view the case progress of their case which will be updated by the lawyer. They can manage their personal wallet. They can view all their bookings, appointments scheduled by the lawyers and registered cases.

Lawyers – Lawyers will register themselves on this application. They can post blogs and job/internship advertisements. They can manage the appointments booked by the clients. They can also schedule appointments for their existing clients and also update the case history which the client can view. They can answer the queries of the users. They can accept or decline the booking made by the client. They can manage their personal wallet. They can view their profile and edit their profile details like experience, number of cases handled and won, professional fees, address etc... They can view the applicants for a particular job which they have posted.
