OBJECT ORIENTED SOFTWARE ENGINEERING

Architectural Design

Archana A

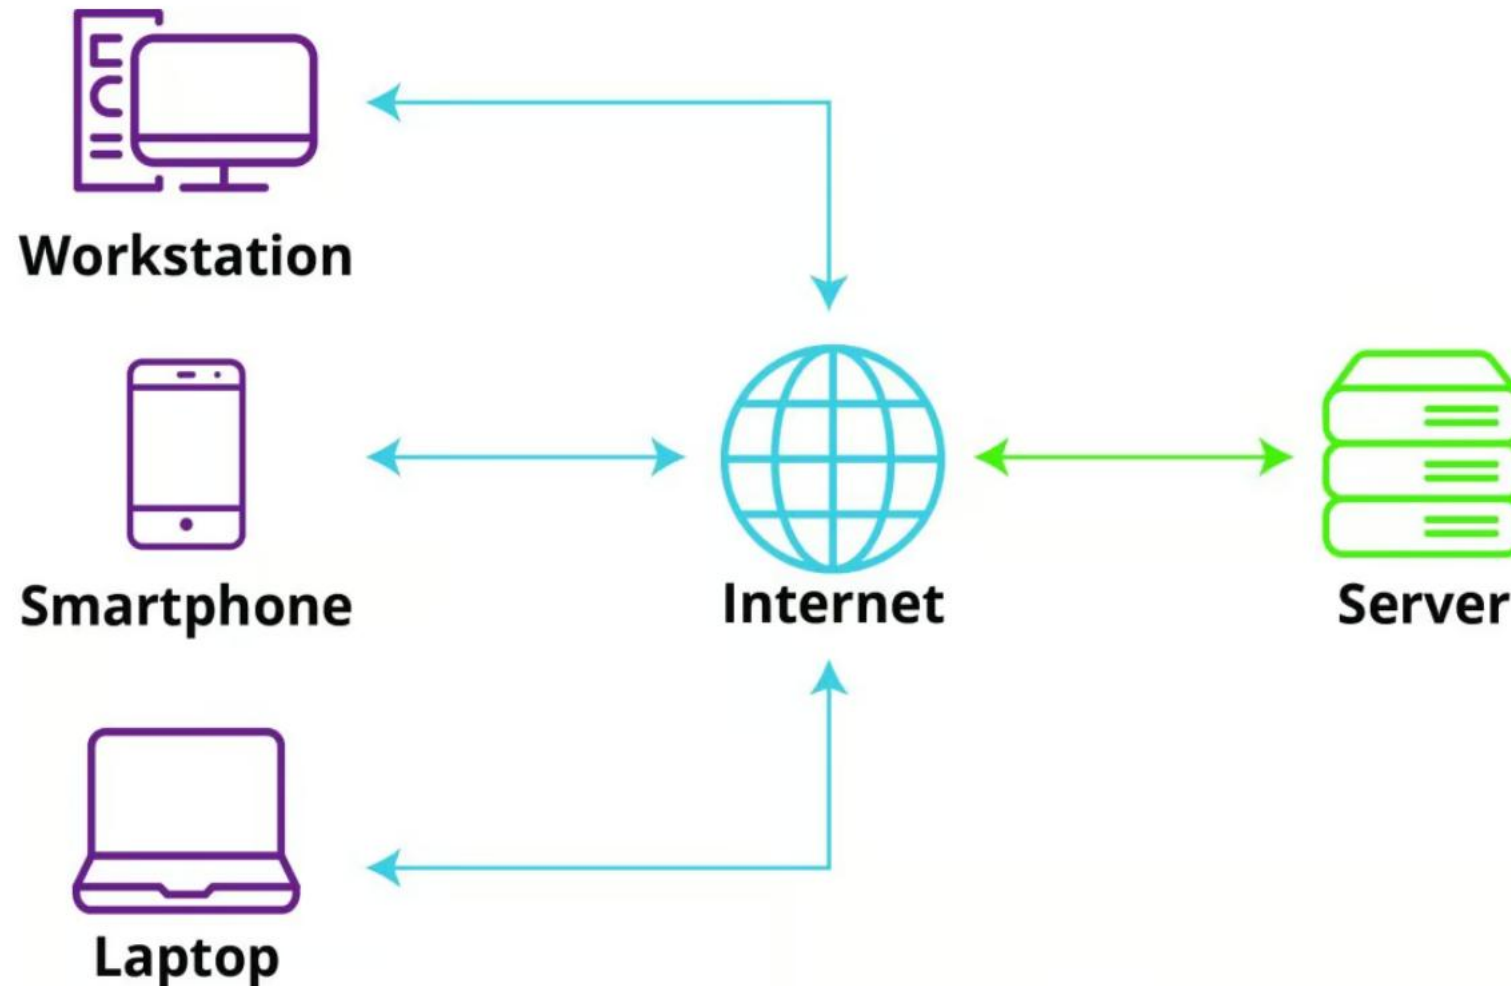

Department of Computer Applications

- Distributed system model which shows **how data and processing is distributed across a range of components.**
- Set of stand-alone servers which provide specific services such as **printing, data management**, etc.
- Set of clients which call on these services.
- Network which allows clients to access servers

OBJECT ORIENTED SOFTWARE ENGINEERING

2. Client-Server (Services and Servers) Model

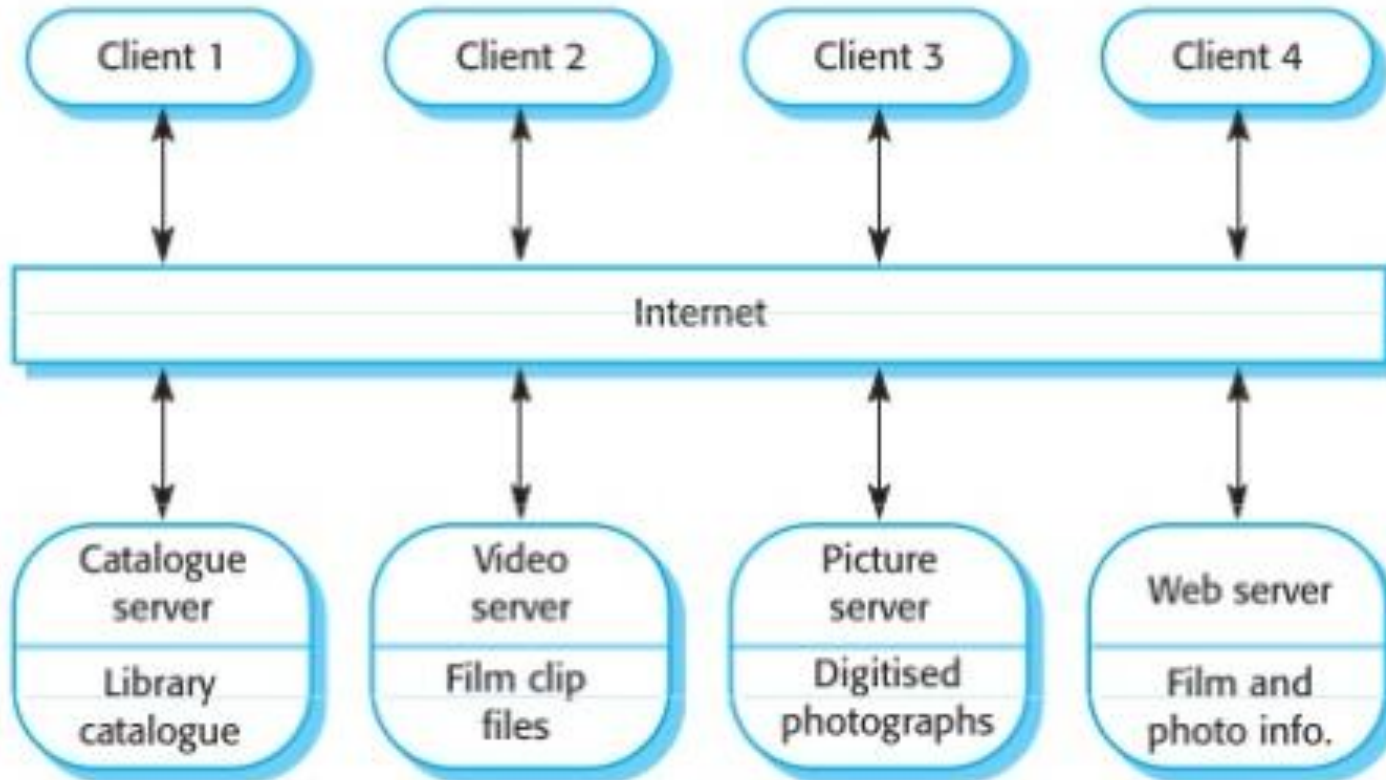

- For example:

OBJECT ORIENTED SOFTWARE ENGINEERING

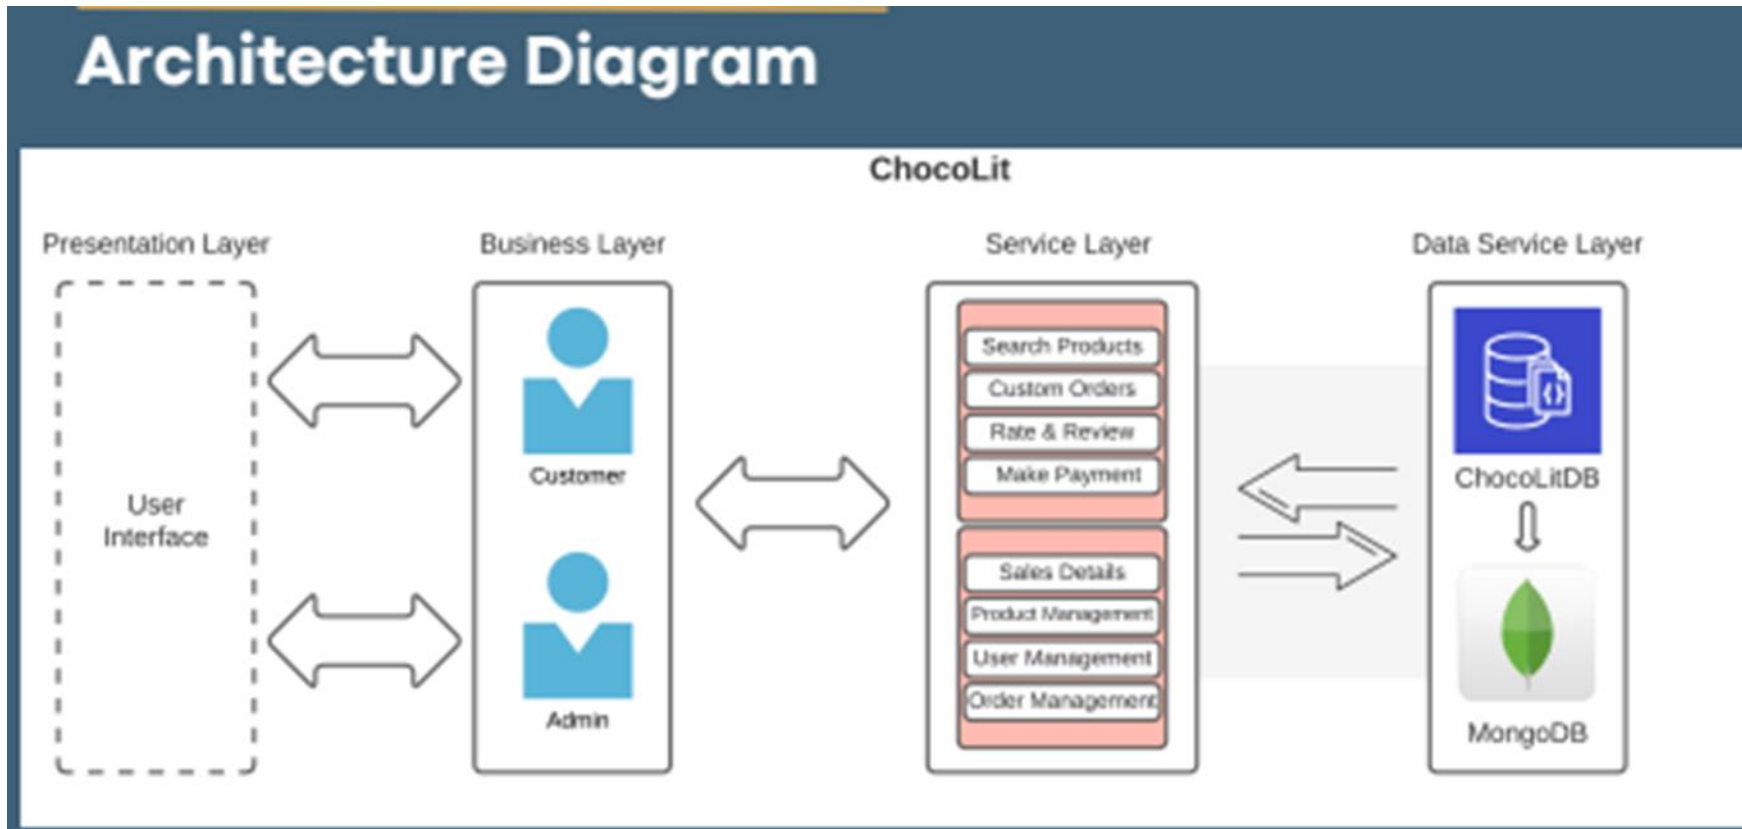

2. Client-Server (Services and Servers) Model

- For example: Film and picture library

- Used to model the **interfacing of sub-systems**
- Organizes the system into a **set of layers** (or abstract machines) each of which provide **a set of services**.
- Supports the incremental development of sub-systems in different layers. When a layer interface changes only the adjacent layer is affected.
