OBJECT ORIENTED SOFTWARE ENGINEERING

Architecture Genre

Archana A

Department of Computer Applications

- The architectural genre will often dictate the specific architectural approach to the structure that must be built.
- **Genre** implies a specific category within the overall software domain.
- Within each category, it encounter a number of subcategories.
 - For example, within the **genre of buildings**, you would encounter the following general styles: **houses**, **apartment buildings**, **office buildings**, **industrial building**, **warehouses**, and so on

- Within each general style, more specific styles might apply. **Each style** would have a structure that can be described using a **set of predictable patterns**
- Here are some architectural genres for software based systems:
 - **Artificial intelligence** – systems that simulate or augment human cognition, locomotion, or other organic processes.
 - **Commercial and nonprofit** – systems that are fundamental to operation of a business enterprise.

- **Communications** – systems that provide the infrastructure for transferring & managing data.
- **Content authoring** – systems that are used to create or manipulate textual or multimedia artifacts.
- Similarly there are many other architecture genres like **Devices, Entertainment and sports, Financial, Games, Government, industrial, legal, Medical, Military, Operating systems, Platforms, Scientific, Tools, Transportation, and Utilities.**
