AI Landscape

S Thenmozhi

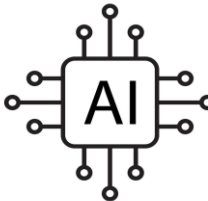

Department of Computer Applications

Types of AI

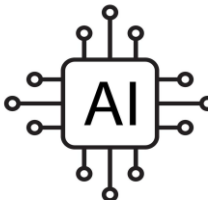

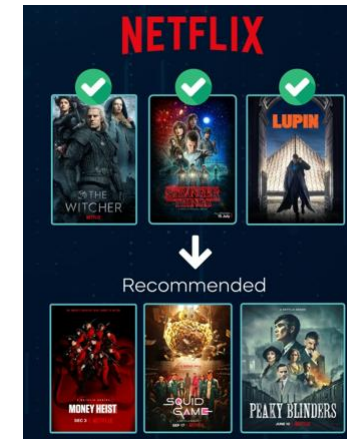

3 Kinds of AI – Based on Capabilities

1. Artificial Narrow Intelligence
2. Artificial General Intelligence
3. Artificial Super Intelligence

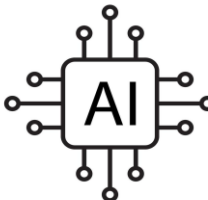

Artificial Narrow Intelligence (ANI)

- Also called as Weak AI
- Solves specific set of tasks that are narrowly defined
- No thinking capability involved
- Eg: Siri, Alexa, AlphaGo, Self-driving cars, ChatGPT ...

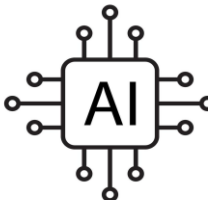

Artificial General Intelligence (AGI) -

- Also called as Strong AI
- Machines possess the ability to think and make decisions just like humans
- Not Achieved. But soon it will be achieved. It is going to be the threat for human existence
- Eg: Autonomous cars talking to passengers about road traffic, treatment planning with doctors

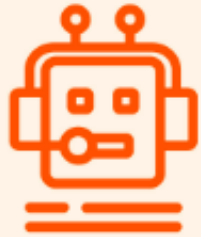

Artificial Super Intelligence (ASI)

- Capability of machines to surpass human beings
- Hypothetical situation
- Found only in movies and science fiction books
- Eg: New laws in physics, Give solutions to poverty, disaster management, managing extraterrestrial elements etc

ANI vs. AGI vs. ASI

Artificial narrow intelligence (ANI)

Designed to perform specific tasks

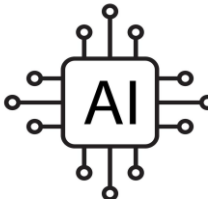

Artificial general intelligence (AGI)

Can behave in a human-like way across all tasks

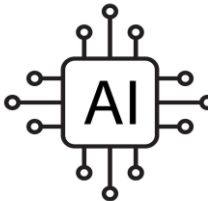

Artificial super intelligence (ASI)

Smarter than humans—the stuff of sci-fi

4 Types of AI – Based on Functionalities

1. Reactive Machine AI
2. Limited Memory AI
3. Theory of Mind AI
4. Self-Aware AI

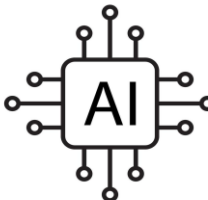

Reactive Machine AI

- Operate based on the present data only taking the account of current situation
- Reactive AI cannot make inferences from the data to evaluate their future actions

IBM chess program that beat Gary Kasparov

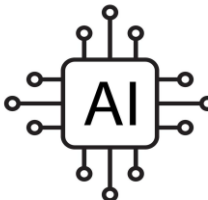

Limited Memory AI

- Can make informed and improved decisions by studying its past data from its memory.
- Such AI has short lived temporary memory that can store past experiences and hence evaluate future actions

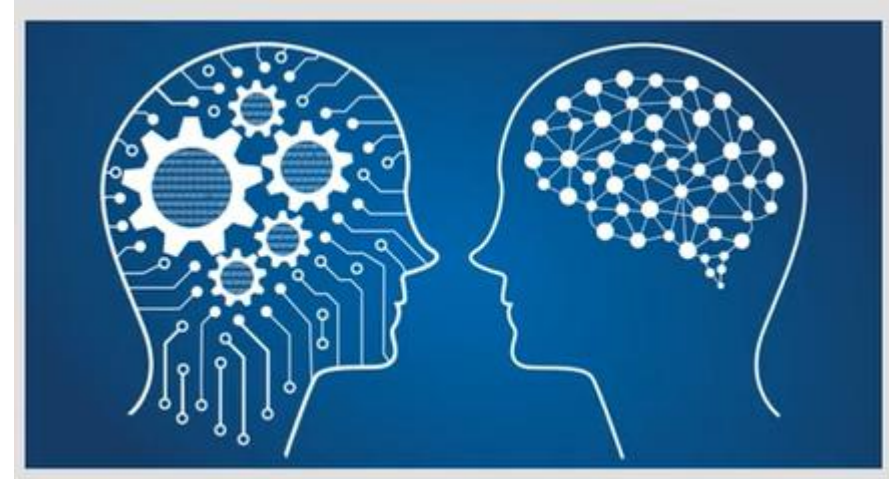

Self Driving Cars uses the data collected in the recent past to make immediate decisions

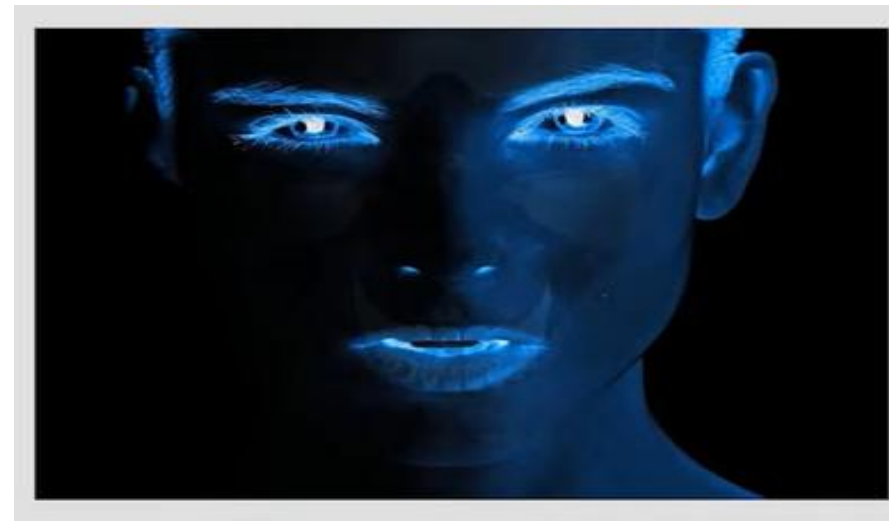

Theory of Mind AI

- Emotional intelligence so that human beliefs and thoughts can be best comprehended
- Speculated to play a major role in human psychology

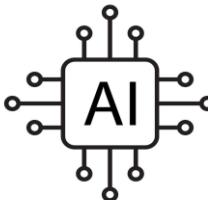

Self-Aware AI

- Machines have their own consciousness and become self-aware
- This type of AI does not exist yet

AI is the fundamental risk to the existence of human civilization – Elon Musk
