OBJECT ORIENTED SOFTWARE ENGINEERING

Process Framework – Umbrella activities

Archana A

Department of Computer Applications

Umbrella Activities

- **Umbrella activities** occur throughout the software process and focus primarily on **project management, tracking, and control.**

- Typical **umbrella activities** are:
 1. Software project tracking and control.
 2. Risk management.
 3. Software quality assurance.
 4. Technical reviews.
 5. Measurement.
 6. Software configuration management.
 7. Reusability management.
 8. Work product preparation and production.

- 1. Software project tracking and control**— Allows the software team to **assess progress** against the **project plan** and take any **necessary action** to maintain the schedule.
- 2. Risk management**— Assesses risks that may **affect the outcome of the project** or the quality of the product.
- 3. Software quality assurance**— Defines and conducts the activities required to **ensure software quality**.

4. Technical reviews— assesses software engineering work products in an effort to **uncover and remove errors** before they are propagated to the next activity.

5. Measurement— defines and collects process, project, and product measures that **assist the team** in delivering software that **meets stakeholders needs**.

6. Software configuration management— manages the **effects of change** throughout the software process

7. Reusability management— defines criteria for **work product reuse** (including software components) and establishes mechanisms to achieve **reusable components**.

8. Work product preparation and production— encompasses the activities required to **create work products** such as **models, documents, logs, forms, and lists**.

THANK YOU
