OBJECT ORIENTED SOFTWARE ENGINEERING

Association Class

Archana A

Department of Computer Applications

- An **Association class** is an **association** that is **also a class**.
- For example,
- Derive identity from instances of the constituent classes.
- Have **attributes** and **operations** & **participate in associations**.

OBJECT ORIENTED SOFTWARE ENGINEERING

Qualified Association

Archana A

Department of Computer Applications

Qualified Association:

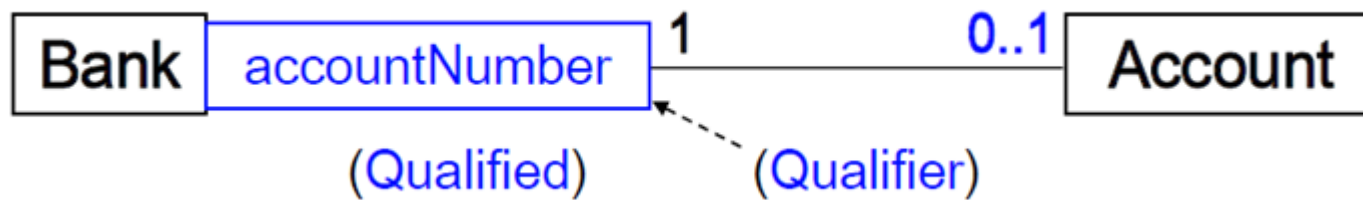

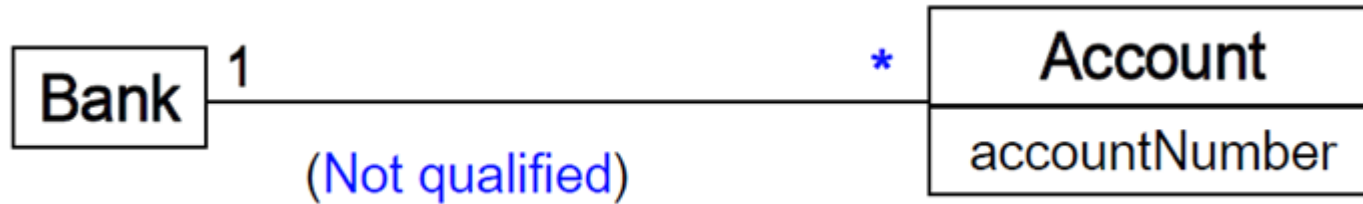

- It is an association in which an **attribute** called **qualifier** disambiguate the objects for a “many” association end.
- It is possible to define qualifiers for one-to-many and many-to-many associations.
- Job of qualifier is to reduce the effective multiplicity, from “many ”to “one”.

OBJECT ORIENTED SOFTWARE ENGINEERING

Qualified Association...
